Trans. of Akademiya Nauk URSS [Kiev. Institut
Metallofiziki]. Sbornik Nauchnykh Rabot, 1955, v. 6,
p. 85-91.

An analysis is made of diffusion plasticity based upon
the diffusion-deformation resistance relationship at
high temperatures. A determination is made of con-
ditions corresponding to maximum strength of a solid
solution at temperatures at which rates of diffusion
are significant, specifically, when melting tempera-
ture decreases with concentration of the secondary
alloying element. At high temperatures the composi-
tion of an alloy shifts with temperature increase in
the direction of the solvent.

Order from CTS or SLA \$1.60

62-10615

Trans. of Izv[estiya] Vysshikh Uchebnikh
Zavedenii. Fizika (USSR) 1961, no. 1, p. 64-70.

DESCRIPTORS: Ferromagnetism. *Magnetic
materials. Metals. Dislocations. Crystal structure.
Annealing. Temperature. Theory. *Coercimeters.

In conformance with modern theories of coercive
force and under the assumption that dislocation-type
defects in the crystalline structure are formed during
high-temperature quenching in a metal, there is ana-
lyzed their interaction with the domain structure. A
computation of the dependence of the coercive force on
the time of low-temperature annealing is in good
agreement with experimental results. A computation
